

# Managing Virtual Machine Disks

---

**Anthony E. Nocentino**

ENTERPRISE ARCHITECT @ CENTINO SYSTEMS

@nocentino [www.centinosystems.com](http://www.centinosystems.com)

# Course Overview

**Introduction and Azure Fundamentals**

**Provisioning Virtual Machines with the Microsoft Azure Portal, Azure CLI and PowerShell**

**Building and Deploying a Custom Virtual Machine Image**

**Managing Virtual Machine Disks**

**Designing and Implementing Azure DevTest Labs**

# Overview

**Understanding Azure Disk Storage**

**Virtual Machine's Disk Topology**

**Common Administrative Tasks**

# Azure Disk Storage

**Disks - VHDs attached to VMs**

**Different types of storage available**

**Standard and Premium**

**Managed and Unmanaged Disks**

**Storage Account**

# Types of Storage

**Standard**

**Premium**

# Standard Storage

**Magnetic based - HDD**

**Solid state based - SSD (Preview)**

**Fixed in terms of IOPs and throughput**

**Tied to the tier of the VM**

**Cost sensitive and latency insensitive workloads**

**Non-production, backup and big data**

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/standard-storage>

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/standard-storage>

# Premium Storage

**Solid state based - SSD**

**Latency sensitive workloads**

**Higher costs**

**IOPs and throughput increase with disk capacity not the VM**

**Performance limits associated with VM's size**

**Use on nearly all production workloads**

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/premium-storage>

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/premium-storage>

# Types of Azure Disks

**Unmanaged**

**Managed**

# Virtual Machine Disk Topology

Operating System Temporary Data	Window	Linux	Purpose
	C:	/dev/sda	House the operating system
	D:	/dev/sdb	Page or swap file and short lived!
	X:	/dev/sdX	Store application data

# Common Disk Administrative Operations

**Create/Provision**

**Attach VHD to a VM**

**Prepare the disk for  
the OS**

**Snapshot**

**Resize**

**Remove**

# Azure Disk Snapshots

**Full, read-only copy of a single VHD**

**Operating System disk**

**Data disk**

**Using a snapshot**

**OS disk - copy snapshot into a new disk, then create a new VM**

**Data disk - copy to a new disk and mount it, could be same VM or new VM**

**Azure Recovery Services**

# Demo

## Common Administrative Disk Operations

- Creating a disk
- Attaching a disk
- Preparing the disk for the OS
- Resizing a disk
- Removing a disk
- Snapshots

Azure CLI Examples

PowerShell Examples

# Summary

**Understanding Azure Disk Storage**

**Virtual Machine's Disk Topology**

**Common Administrative Tasks**

# What's Next!

## Designing and Implementing Azure DevTest Labs
